

Sprint 14 Retrospective

What went well:

- Asked well thought-out questions to the Professor Vong with an expected answer in mind
 - Able to ask back and forth questions to be able to understand all that we needed in one sitting
- Project Plan was very useful towards Sprint Planning
 - Reduced the time it took for sprint planning
- Meetings were well focused and everyone came prepared when asked for certain details
 - I.e. data store/relational tables

What went wrong:

- Inaccurate story pointing for certain features
 - @ Kevin - Loss in productivity when productive hours aren't going down
- @ Kevin and Darius - Did not read the business requirements clear enough
- @ Garrett - Started off working on more than one feature
 - Lost time in this process

What to work on:

- @ Kevin - More involved in story pointing process rather than going with the flow of others
- Create agenda for planned meetings on discord under #meetings 2 days ahead to prepare others
